COURSE OVERVIEW

The SAFe® Product Owner/Product Manager (POPM) certification is designed for individuals who will perform the roles of Product Owner and Product Manager in a SAFe® (Scaled Agile Framework) environment. This intensive 16-hour course provides a deep dive into the Lean-Agile principles and practices necessary to deliver value effectively within an Agile Release Train (ART). Participants will learn how to write Epics, Capabilities, Features, and User Stories, and how to drive value through Program Increments (PIs) and Iterations, ensuring alignment with the strategic vision of the enterprise. This course covers the core tenets of Scaled Agile Framework to enhance product delivery at scale. This certification is crucial for professionals aiming to master the critical link between strategy and execution in large-scale agile deployments. You will gain proficiency in collaborating with Agile teams and other stakeholders to understand customer needs, prioritize work, and guide product development from ideation to delivery. The course covers the SAFe framework extensively, focusing on how Product Owners and Product Managers collaborate to define, build, and validate solutions that are desirable, feasible, viable, and sustainable. Earning your SAFe POPM certification from Computer Pride equips you with globally recognized credentials and the practical skills to excel in agile product management roles. It enhances your ability to foster innovation, improve product quality, and accelerate time-to-market, making you an invaluable asset in organizations transitioning to or operating within a SAFe ecosystem. This course is ideal for existing Product Owners, Product Managers, Business Analysts, and anyone aspiring to lead product initiatives in an enterprise-scale agile environment.

Duration	16 hours
Level	Intermediate
Vendor	Scaled Agile

PREREQUISITES

- Experience in product management, business analysis, or project management

COURSE CURRICULUM

- Supporting the ART throughout PI execution
- Managing the ART backlog and roadmap
- Engaging with customers and stakeholders for continuous feedback
- Participating in System Demos

06 Building the Solution

- Supporting the Inspect & Adapt workshop
- Achieving Continuous Delivery and Release on Demand
- Understanding the SAFe Continuous Delivery Pipeline
- Innovating and planning for the next PI

CAREER PATHWAYS

Graduates of this program are prepared for the following roles:

- > **SAFe Product Owner within an Agile Release Train (ART)**
- > **SAFe Product Manager driving strategic product initiatives**
- > **Agile Product Lead overseeing multiple product lines in a SAFe portfolio**

FREQUENTLY ASKED QUESTIONS

Q: What are the typical prerequisites or recommended experience for individuals planning to take the SAFe POPM certification course?

While there are no strict prerequisites, attendees typically benefit from having experience in a product or business role, such as Product Manager, Product Owner, Business Analyst, or Solution Manager. A basic understanding of Agile concepts and principles is also highly recommended to maximize the learning experience and effectively apply SAFe principles.

Q: How does the SAFe POPM certification differ from other Agile Product Owner or Product Manager certifications, and what unique advantages does it offer?

The SAFe POPM certification specifically focuses on applying Product Owner and Product Manager responsibilities within the Scaled Agile Framework (SAFe), which is designed for enterprise-scale agile adoption. Unlike single-team agile certifications, POPM emphasizes alignment across multiple teams (Agile Release Trains), strategic portfolio alignment, and large-scale value delivery, providing a comprehensive understanding of how these roles operate effectively in a complex organizational context. It provides a unique lens for scaling agile practices.

Q: What real-world challenges will I be equipped to solve as a certified SAFe Product Owner/Product Manager?

As a certified SAFe POPM, you will be equipped to tackle challenges such as ensuring alignment between product strategy and execution across large teams, effectively prioritizing features for maximum business value, facilitating

seamless collaboration between business and technical teams, and continuously adapting product roadmaps to changing market demands in a scaled agile environment. You'll drive predictable delivery of valuable solutions and manage complex product backlogs at an enterprise level.
